Conclusion : The Ibm class was very engaging and interesting for me. Through this project, I gained practical experience in building an AI-powered educational tool from scratch. I learned how to use ChatGPT to generate structured study materials, specifically creating the "Cybersecurity_study_material_AI_Personal_study_assistant.pdf" document. Furthermore, I learned how to train a Retrieval-Augmented Generation (RAG) chatbot using Chatbase to accurately answer questions based strictly on my uploaded document. Finally, I successfully integrated this chatbot into a custom website, which taught me how to deploy AI models for real-world user interaction. But for me i felt wasted sometime for this. Overall, this project provided valuable hands-on skills in AI content generation, chatbot configuration, and web integration.
